https://example.com

16 years of experience building web, frontend, backend, databases, mobile.
Team player. Coder, architect and ad hoc management. Autonomous problem-solver.

Alma Mater: National Technological University, Argentina

Top Programming skills:
Javascript/Typescript, CSS/SCSS, Python/Django, Postgresql/Mysql/Mongodb.
Top Soft skills:
Mentoring. Team communication facilitator, fostering collaboration and unity.
Requirements analysis with stakeholders to simplify engineering complexity.
Very autonomous and persistent problem-solver.

Work Experience

Principal Software Engineer
examplebet.ag [Example subsidiary] - Online gaming

2023 - current (4 years)
Remote, distributed team

I serve as the link between the Architects team, the Product Owner and the developers adding technical details and scope of tasks for an engineering team of 8+. I also help the team **adopt AI tools and processes** and solve the most **complex technical** challenges.
Key achievements:
- DevEx: Cut backend build times from 15 → 5 minutes, introduced HMR and css precompilation to reduce dev feedback loop from 10 min → 10 sec, **massively boosting developer velocity**.
- Increased TypeScript coverage from 20% → 80% (backend) and 0% → 40% (frontend), reducing bugs and **improving code maintainability**.
- **Mentored team members** via 1:1 hands-on sessions and drove adoption of technical best practices.

Technologies

Javascript/Typescript, Nodejs, NestJS, MongoDB, NextJS, Svelte, CSS, Vite, Jest, Bash,
Kubernetes, Docker compose, K6, ArgoCD, Jenkins.
